GENE INFORMATION

Alternative Names	CIA-II
Description	This gene encodes a member of the H3/H4 family of histone chaperone proteins and is similar to t he anti-silencing function-1 gene in yeast. The encoded protein is the substrate of the tousled-like kinase family of cell cycle-regulated kinases, and may play a key role in modulating the nucleosom e structure of chromatin by ensuring a constant supply of histones at sites of nucleosome assembl y.
