GENE INFORMATION

Alternative Names	CMD1; SRXY10; SRA1
Description	This gene is a protein coding gene. Exhibits several functions, including DNA-binding transcription activator activity, RNA polymerase II-specific; RNA polymerase II cis-regulatory region sequence-specific DNA binding activity; and protein kinase A catalytic subunit binding activity. Involved in several processes, including animal organ development; positive regulation of cell population proliferation; and regulation of transcription by RNA polymerase II. Localizes to nucleoplasm and protein-containing complex. Implicated in 46,XX sex reversal 2; 46,XY sex reversal 10; and campomelic dysplasia.
