GENE INFORMATION

Alternative Names	BGP-1; BGPI; CD66a
Description	This gene is a protein coding gene. Exhibits cytoskeletal protein binding activity; enzyme binding activity; and identical protein binding activity. Involved in several processes, including negative regulation of T cell receptor signaling pathway; negative regulation of leukocyte mediated cytotoxicity; and wound healing, spreading of cells. Localizes to several cellular components, including apical plasma membrane; cell surface; and cell-cell junction. Colocalizes with T cell receptor complex.
