GENE INFORMATION

Alternative Names	JCAM; JAM-A; CD321
Description	This gene is a protein coding gene. Exhibits PDZ domain binding activity; integrin binding activity; and protein homodimerization activity. Involved in several processes, including cellular response to mechanical stimulus; regulation of GTPase activity; and regulation of actin cytoskeleton organization. Localizes to bicellular tight junction; plasma membrane; and protein-containing complex. Implicated in hypertension. Biomarker of breast cancer and systemic scleroderma.
