GENE INFORMATION

Alternative Names	AP1
Description	<p>This gene is a protein coding gene. Exhibits several functions, including DNA-binding transcription factor activity, RNA polymerase II-specific; GTPase activator activity; and R-SMAD binding activity. Involved in several processes, including regulation of transcription, DNA-templated; regulation of viral transcription; and transmembrane receptor protein serine/threonine kinase signaling pathway. Localizes to nuclear euchromatin; nucleoplasm; and transcription factor AP-1 complex. Implicated in pulmonary tuberculosis. Biomarker of Hodgkin's lymphoma; breast cancer; carcinoma (multiple); and colorectal adenoma.</p>
