GENE INFORMATION

Alternative Names	PRR2; CD112
Description	This gene is a protein coding gene. Exhibits cell adhesion molecule binding activity and protein homodimerization activity. Involved in several processes, including coreceptor-mediated virion attachment to host cell; homophilic cell adhesion via plasma membrane adhesion molecules; and positive regulation of immune response. Localizes to cell surface; cell-cell junction; and integral component of membrane. Implicated in Alzheimer's disease and multiple sclerosis.
