GENE INFORMATION

Alternative Names	ANCCA; CT137; PRO2000
Description	A large family of ATPases has been described, whose key feature is that they share a conserved r egion of about 220 amino acids that contains an ATP-binding site. The proteins that belong to this f amily either contain one or two AAA (ATPases Associated with diverse cellular Activities) domains. AAA family proteins often perform chaperone-like functions that assist in the assembly, operation, or disassembly of protein complexes. The protein encoded by this gene contains two AAA domain s, as well as a bromodomain. [provided by RefSeq, Jul 2008]
