GENE INFORMATION

Alternative Names	ARP; Arp1; ARL18
Description	The protein encoded by this gene is a membrane-associated GTP-ase which localizes to the plas ma membrane and is related to the ADP-ribosylation factor (ARF) and ARF-like (ARL) proteins. Thi s gene plays a role in membrane trafficking between the trans-Golgi network and endosomes. Alte rnatively spliced transcript variants encoding different isoforms have been identified.
