## GENE INFORMATION

<b>Alternative Names</b>	CEACAM6; NCA; CEAL
<b>Description</b>	This gene is a protein coding gene. This gene encodes a protein that belongs to the carcinoembryonic antigen (CEA) family whose members are glycosyl phosphatidyl inositol (GPI) anchored cell surface glycoproteins. Members of this family play a role in cell adhesion and are widely used as tumor markers in serum immunoassay determinations of carcinoma. This gene affects the sensitivity of tumor cells to adenovirus infection.
