Description	ATP11C (ATPase Phospholipid Transporting 11C) is a Protein Coding gene. Diseases associated with ATP11C include Hemolytic Anemia, Congenital, X-Linked and Thrombophilia, X-Linked, Due To Factor Ix Defect. Among its related pathways are Transport of glucose and other sugars, bile salts and organic acids, metal ions and amine compounds and Ion channel transport. Gene Ontology (GO) annotations related to this gene include nucleotide binding and cation-transporting ATPase activity. An important paralog of this gene is ATP11A.
