GENE INFORMATION

Alternative Names	ARL6; ARF4L
Description	ADP-ribosylation factor 4D is a member of the ADP-ribosylation factor family of GTP-binding protei ns. ARL4D is closely similar to ARL4A and ARL4C and each has a nuclear localization signal and an unusually high guanine nucleotide exchange rate. This protein may play a role in membrane-as sociated intracellular trafficking. Mutations in this gene have been associated with Bardet-Biedl syn drome (BBS). [provided by RefSeq, Jul 2008]
