GENE INFORMATION

Alternative Names	EGP314; ESA; EGP-2; MK-1; CO-17A
Description	This gene is a protein coding gene. Predicted to have cadherin binding activity involved in cell-cell adhesion. Involved in several processes, including negative regulation of cell-cell adhesion mediated by cadherin; positive regulation of stem cell proliferation; and regulation of gene expression. Localizes to several cellular components, including basolateral plasma membrane; bicellular tight junction; and lateral plasma membrane. Implicated in congenital diarrhea 5 with tufting enteropathy and hereditary nonpolyposis colorectal cancer type 8. Biomarker of hepatocellular carcinoma.
