GENE INFORMATION

Alternative Names	FLJ44171; TP120
Description	This gene is a protein coding gene. Exhibits identical protein binding activity; lipopolysaccharide binding activity; and lipoteichoic acid binding activity. Involved in several processes, including heterophilic cell-cell adhesion via plasma membrane cell adhesion molecules; lipopolysaccharide-mediated signaling pathway; and positive regulation of cytokine production involved in inflammatory response. Localizes to immunological synapse and intrinsic component of plasma membrane. Colocalizes with T cell receptor complex.
