GENE INFORMATION

Alternative Names	BDP; DRIL2
Description	This gene encodes a member of the ARID (AT-rich interaction domain) family of DNA-binding prote ins. The encoded protein is homologous with two proteins that bind to the retinoblastoma gene pro duct, and also with the mouse Bright and Drosophila dead ringer proteins. A pseudogene on chro mosome 1p31 exists for this gene. Members of the ARID family have roles in embryonic patternin g, cell lineage gene regulation, cell cycle control, transcriptional regulation and possibly in chromat in structure modification.
