GENE INFORMATION

Alternative Names	ARF1GAP; HRIHFB2281
Description	The protein encoded by this gene is a GTPase-activating protein, which associates with the Golgi apparatus and which interacts with ADP-ribosylation factor 1. The encoded protein promotes hydro lysis of ADP-ribosylation factor 1-bound GTP and is required for the dissociation of coat proteins fr om Golgi-derived membranes and vesicles. Dissociation of the coat proteins is required for the fusi on of these vesicles with target compartments. The activity of this protein is stimulated by phospho inosides and inhibited by phosphatidylcholine. Alternative splicing results in multiple transcript vari ants. [provided by RefSeq, Jul 2013]
