GENE INFORMATION

Alternative Names	Oct-4; Oct-3; OTF3; OTF4
Description	This gene is a protein coding gene. Exhibits several functions, including DNA-binding transcription repressor activity, RNA polymerase II-specific; nucleic acid binding activity; and ubiquitin protein ligase binding activity. Involved in several processes, including BMP signaling pathway involved in heart induction; regulation of canonical Wnt signaling pathway; and regulation of transcription, DNA-templated. Localizes to several cellular components, including cytosol; mitochondrion; and nucleoplasm. Implicated in embryonal carcinoma and seminoma. Biomarker of dysgerminoma; embryonal carcinoma; in situ carcinoma; seminoma; and transitional cell carcinoma.
