GENE INFORMATION

Description

This gene is a protein coding gene. Exhibits several functions, including collagen binding activity involved in cell-matrix adhesion; enzyme binding activity; and fibronectin binding activity. Contributes to C-X3-C chemokine binding activity. Involved in several processes, including cell surface receptor signaling pathway; regulation of apoptotic process; and regulation of signal transduction. Localizes to several cellular components, including focal adhesion; integrin complex; and invadopodium membrane. Colocalizes with perinuclear region of cytoplasm and ruffle membrane. Biomarker of lung non-small cell carcinoma and lung small cell carcinoma.
