GENE INFORMATION

Alternative Names	CP37; CYP11A7; P450HLP2; P450-HFLA; P-450111A7; P-450(HFL33)
Description	This gene encodes a member of the cytochrome P450 superfamily of enzymes, which participate in drug metabolism and the synthesis of cholesterol, steroids and other lipids. This enzyme hydroxylates testosterone and dehydroepiandrosterone 3-sulphate, which is involved in the formation of estradiol during pregnancy. This gene is part of a cluster of related genes on chromosome 7q21.1. Naturally-occurring readthrough transcription occurs between this gene and the downstream CYP3A51 P pseudogene and is represented by GenelD:100861540.
