GENE INFORMATION

Description	The product of this gene is an enzyme involved in lipid metabolism, and it encodes cytosolic aceto acetyl-CoA thiolase. This gene shows complementary overlapping with the 3-prime region of the T CP1 gene in both mouse and human. These genes are encoded on opposite strands of DNA, as well as in opposite transcriptional orientation. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Dec 2014]
